

# Cornish Butfer 

PCB artwork ©2016 drdFX
Release date: 2016.01.28.

A very useful buffer implementation, quite neutral too.

## SCHEMATIC

## NOTES

It is quite a simple one, there are no pots, no controls at all, only power, input and output. You can add this as a daughterboard in any of your pedals as it is small enough to fit into other pedals, or build it into a separate enclosure.

## LAYOUT

Print out the PCB design without any resizing options and make sure you switch off the "fit to page" option. The design is free for personal/home use and you also may build one or two for your friends, but the PCB layout is my artwork, therefore protected by copyright and is not permitted to be used for commercial purposes.
